

## 4 Way Modular Panel Mount

### Alarm Annunciator System

The APM4 by Mimic Components is a micro controller based alarm annunciator system.

It was designed for use as an industrial panel mount alarm system.

This modular system comprises of 4 way panel mount alarm modules

which wire directly to the field. The system comprises of a control unit which houses the push buttons, inputs & power supply inputs aswell as potential free contacts for the horn & trip functions. The alarm units consist of 4 way alarm modules with field inputs & integrated backlit LED displays.

One control unit can drive up to 16 slave units, thus expanding the alarm unit to a 64 way alarm.

With custom ribbon cables this limit can be extended to above 150 alarms.
