

Everswitch Piezo Electric HMI Keyboards

The Everswitch range of Piezo Electric Human Machine Interfaces range from single switches, to keypads, control panels, illuminated switches and full size keyboards.

The Everswitch family of products was successfully tested for 50,000,000 cycles as well as vibration, harsh environment, temperature (low & high), temperature shock, rain, sand & dust, humidity and impact tests, and combined with the non mechanical solid state patented design, the result is a range of tamper and vandal proof products which are easily adaptable to existing systems as well as new designs and interfaces, without compromising on aesthetics and versatility.

Everswitch HMI's are also customisable, allowing complete flexibility with custom display text and keypad applications

Applications Include...

- Elevators
- Security access points
- Boom entrances
- Ticket vending machines
- Industrial coffee/drink dispensers
- Clean rooms
- Fuel pumps
- Mining
- Military Aircraft
- ATM's

Features...

- Tamper Proof
- Vandal Proof
- Submersable
- 50 Million Cycles
- Service Free
- IP68
- No Moving Parts
